What is Memory Loss?

Here are some examples:
- Repeating the same questions
- Forgetting names
- Misplacing things
- Losing track of conversations

Why Research?

Currently, the causes of memory problems are unknown. Scientists are conducting research to better understand:
- How these diseases develop
- What can be done to prevent them
- How to slow or stop their progression

Why Participate?

- To be involved in your health care!
- To have access to new treatments before they are widely available.
- To help others today and benefit future generations.

Volunteers are needed to participate in new groundbreaking research studies.

Everyone is welcome. Even if you do not have any memory loss. As little as 1 hour of your time can help.

Research is going beyond what we know today to help shape the future.
